

Aidalarm – Stainless Steel Disabled Toilet Alarm Controller

A600F

The Stainless Steel, flush mount Disabled Person Toilet Alarm controller has been designed for more prestigious locations. AIDALARM meets the growing demand for an emergency signalling system for disabled persons. Everything is available to deliver an effective, fully compliant, simple to install and simple to use system.

Please note: The controller requires a separate 12vdc PSU minimum of 250mA, see Part No. PSU-12/2AB, if battery backup is required see Part No. BAT12V3300LA.

How the Aidalarm Works

- The Aidalarm controller should be sited where staff are located who can respond to an emergency call.
- Ceiling pull cord & optional Dado panic strip or call buttons are situated in the toilet or other area where assistance may be required.
- Pulling the cord or pressing the panic strip/call button generates an immediate audible/visual alarm at both the WC and at the control panel. An LED illuminates on the pull cord giving the caller reassurance the call has been placed.
- The call can be silenced by pressing the button on the front of the control panel.
- The audible indicators at the WC will bleep every 5 seconds to re-assure the caller.
- Should the cord be pulled again while in the silenced state, the system will call again.
- Non-attendance will cause the panel to bleep every 40 seconds as a warning.
- The system can only be reset by the Press to Reset button located at or near the point of call.
